 - Worked with small scale business customers to understand needs and provide Microsoft Office service.
 - Helped in migrating to Office 365 from Exchange Server and Gmail.
 - Maintained excellent attendance record, consistently arriving to work on time.
 - Drove operational improvements.

PROJECTS

- **Neutralize** *September 2020 – Present*
Visit your nearest COVID centers, by booking an appointment so that you wouldn't have to stand in queues, which would help social distancing a lot and risk of exposure to the virus. Add your symptoms, if you have any so that the hospitals can come up with a sooner date and time slot depending on your symptom. Built using Flutter, Google Maps API, Google Authentication and Firebase Firestore.
- **HealthX** *September 2020*
A fusion app of health and restaurants so that you can maintain your health while still having a little bit cheat around, built using Flutter, Google Maps API for restaurants, Firebase ML Vision, Dialog Flow, Firestore and Google Authentication for sign in.
- **StudyRoom** *August 2020 – September 2020*
A virtual classroom app, built using Agora RTM Flutter SDK and Flutter for live video call, enabling better usability and an immersive classroom experience for the teachers and the students. The app also uses Google Authentication from Firebase for seamless signing in.
- **News For COVID** *June 2020*
News For COVID is an iOS app that gives you the latest news about COVID-19 using SwiftUI and Algolia Hacker News to provide users news regarding various domains of stock marketing, business, sports, and many more. This helps users get to know about only the effects of the pandemic on various domains as well as its global effect.
- **Watered** *June 2020*
Watered is a Flutter app that helps you monitor your household water consumption and helps you detect water leakages and gives you plumber details, nearby your location in case you have a leakage. It also aims at saving natural resources such as our water and other vital resources, by providing a donation segment and a read about how we are depleting our resources.
- **Parallel Computing Cluster using Docker** *August 2019 – Oct 2019*
The program is a demonstration of parallel computing on Docker, it calculates the sum of the hash values in two different approaches. One includes an addition with a single client, demonstrating it as a single computing and other includes two clients, demonstrating multiple computing. This runs in a Docker container, and later the outputs and response times are compared to prove that parallel computing with multithreading is way faster than single computing.

ACHIEVEMENTS

- Winner as Google Cloud COVID-19 Hackathon Fund team in MedHacks 2020 by John Hopkins University for the project Neutralize.
- MLH Bon Hacketit, Best Use of Google Cloud Winner for the project HealthX.
- Winner of MLH Aye Aye Hackers under the domain Best Use of Google Cloud.
