PROJECTS

- **Neutralize**

September 2020 – Present

- A COVID-19 appointment booking, reducing physical exposure of users with public, reducing exposure to the virus.
- Users can add symptoms, so that hospitals can check and determine user conditions to provide assistance if needed.
- Built with Flutter, Google Maps API, Google Authentication and Firebase Firestore.
- Deployed on Codemagic and Travis CI for CI/CD testing.
- Won under Google Cloud COVID-19 Hackathon Fund team in MedHacks 2020 by John Hopkins University.

- **HealthX**

September 2020

- A fusion app of health and restaurants for users to maintain their health and eat healthy food.
- Users can use food scanner to take instant picture of restaurant fliers and convert into text for better visualization.
- An automated chat-bot which would help users gain insights about nearby places and best food available.
- Built with Flutter, Google Maps API, Firebase ML Vision, Dialog Flow, Firebase Firestore and Google Authentication.
- Deployed on Azure DevOps for CI/CD.
- Won best use of Google Cloud in MLH Bon Hacketit hackathon.

- **StudyRoom**

August 2020 – September 2020

- A virtual classroom app for better usability and immersive classroom experience for teachers and students.
- Built with Flutter, Agora RTM SDK and Google Authentication

- **finDoodle**

October 2020

- Platform for children to have access to wide array of financial topics.
- These topics are easily understandable with the help of Augmented Reality.
- The app also has a built-in split checker where children can split bills and understand the concept of billing platforms with the help of a quiz.
- An automated chat-bot to assist children if they need any help with the app.
- Built with Flutter, EchoAR, Google Authentication and Firebase Firestore
- Deployed on Azure DevOps and Travis CI for CI/CD
- Won 3rd place at HackPSU and Capital One, best Financial Hack at HackPSU
