PROJECTS

- Flutter wit.ai Package June 2021 – Present
 - Integrating Facebook's wit.ai with Flutter for getting structured responses from wit.ai console for the user's query making the integration seamless.
 - Users can simply enter their query and secret access code from wit.ai console and receive their response based on the intents trained.
 - Simple to integrate with Flutter, making communications directly between Dart code and wit.ai console.
 - Package's testing was deployed on Codemagic.
- Pacify May 2021 – June 2021
 - Pacify is a mental health application for users to relax and rest, made for iOS, using Flutter and wit.ai
 - Integrated Sign in with Facebook, CRUD operations on Firebase and statistics based on mental health.
 - Adding daily moods, helping users jot down their moods to help them relax and statistics based on the moods displayed on weekly and monthly basis.
 - Deployed on Codemagic for build automation.
 - Received second place on Facebook F8-Refresh Hackathon for Track 1: wit.ai

- Neutralize

September 2020 – December 2020

- A COVID-19 appointment booking, reducing physical exposure of users with public, reducing exposure to the virus. o Users can add symptoms, so that hospitals can check and determine user conditions to provide assistance if needed.
- Built with Flutter, Google Maps API, Google Authentication and Firebase Firestore.
- Deployed on Codemagic and Travis CI for CI/CD testing.
- Won under Google Cloud COVID-19 Hackathon Fund team in MedHacks 2020 by John Hopkins University.

- Study Room

August 2020 – September 2020

- A virtual classroom app for better usability and immersive classroom experience for teachers and students.
- Built with Flutter, Agora RTM SDK and Google Authentication
